Summative Assessment — Creative App Design & Logic
Ishita Bhattacharjee
Summative Summative 14/16 Students Tuesday at 3:00 PM
IB MYP Design - Ms Ishita (MYP3) C

Task Details

Task Details:

Situation : You are a Junior UX/UI Designer at a student-led tech studio. Your studio has been invited to enter a local "Youth Innovation Challenge," where teams design a functional app prototype that solves a real problem for their community, their school, neighbourhood, or city. The most original, user-centred, and technically sound prototype wins funding for development. Your task is to research, design, and build an interactive app prototype, supported by a written design rationale and a short pitch, ready to present to a panel of judges.

Goal: You are a junior UX designer at a student-led tech studio tasked with creating a functional app prototype that solves a real problem for your community (school, neighbourhood, or city).

Role: Junior UX/UI designer at a tech startup.

Audience: A panel of judges including your teacher, peers, and an invited community stakeholder (e.g. school librarian, local NGO representative).

Situation: Your studio is entering a local "Youth Innovation Challenge." The most original, user-centred, and technically sound prototype wins funding for development.

Product: A multi-screen interactive app prototype (Figma, Marvel, or paper prototype) supported by a written design rationale (400–600 words) explaining your design choices, iterations made, and how feedback shaped your final design. Include a short pitch (2–3 min) on presentation day.

Standards: Your work will be assessed against MYP Design **Criterion A (i–iv) and Criterion B (i–iv)**, detailed in the Task-Specific Clarification below.

What's Expected Crit A & B - GRASPS

Criterion A: Inquiring and Analysing

i. Explain and justify the need for a solution to a problem: Explain and justify why your community needs this app, backed by research into the problem and who it affects.

ii. Construct a research plan: Show a research plan that states and prioritizes the primary and secondary research needed to develop your app.

iii. Analyse a group of similar products: Analyse existing apps that inspired your solution — what you borrowed or avoided.

iv. Develop a design brief: Present a design brief that summarizes your research findings and states what you're going to design and make.

Criterion B: Developing Ideas

i. Develop a design specification: List the success criteria your app must meet, based on the data you collected in Criterion A.

ii. Present a range of feasible design ideas: Show multiple design ideas (sketches/wireframes) that someone else could interpret and understand.

iii. Present the chosen design and reasons for its selection: Show your final chosen design and explain why you picked it over your other ideas.

iv. Develop accurate planning drawings/diagrams: Provide clear planning diagrams/wireframes and list what you need to build your prototype (tools, screens, features).

Task Specific Clarification
Contains the full task details (Goal/Role/Audience/Situation/Product), and the **Task-Specific Clarification (TSC)** - the exact achievement-level descriptors for Criterion A and B, with command terms bolded so you can see precisely what separates a 3–4 from a 7–8 at each strand. Read this first, and check back against it as you work.

Template
The working document where you'll actually build your portfolio strand-by-strand templates for Criterion A (i–iv) and Criterion B (i–iv), with worked examples and sentence starters for each. This is what you submit.

How to use them together: the Task Sheet tells you *what's expected*; the Template is *where you do the work*. Check your progress in the Template against the matching strand in the Task Sheet's TSC as you go.

Assessment Criteria

A: Inquiring and analysing

Achievement Level	Descriptor
0	The student does not reach a standard described by any of the descriptors below.
1 - 2	The student: i. states, in two or three sentences, that a solution is needed for the community problem with no justification or evidence. ii. states 2–3 basic facts found during primary / secondary research, connected to the problem,
3 - 4	The student: i. outlines the problem and who it affects, with limited supporting evidence(Text, Images). ii. outlines a basic research plan (simple list, with some guidance) naming 1–2 primary and secondary research needs. iii. outlines 1–2 existing apps/websites describe what they do, how the platform is structured without deeper analysis. iv. develops a design brief stating what will be made, doesn’t clearly outlines or connects to the research findings and sources not consistently cited.
5 - 6	The student: i. explains the problem in detail who's affected, cause, and effect supported by 2–3 pieces of research(primary/secondary) with infographics (secondary and/or primary), cited. ii. constructs a research plan (table and list/mind map) stating and prioritizing at least 3–4 research needs.. iii. describes 3 existing digital platforms - what works and what doesn't for each.(using any of these frameworks CFPC, ACCESS FM, SWOT, or PPC as appropriate) iv. develops a design brief outlining research findings from strands i–iii and states what will be designed and

Achievement Level	Descriptor
	made, sources cited.
7 - 8	The student: i. explains and justifies the need using one connected paragraph (which contains context ,target audience, problem with evidence, the Need), backed by 2–5 secondary sources and 1-2 primary research- (survey/ interview), all cited in text. ii. Independently constructs a research plan (mind map/flowchart and a table) with a minimum of 7 prioritized, open research questions, naming sources. iii. analyses 4 existing apps in detail (CFPC, ACCESS FM, SWOT, or PPC as appropriate), stating what will be carried forward and what will be avoided, with screenshots. iv. develops a design brief connecting and summarizing findings from strands i–iii, states a design question and a clear design statement (what will be made and for whom), and cites research sources referred to.

B: Developing ideas

Achievement Level	Descriptor
0	The student does not reach a standard described by any of the descriptors below.
1 - 2	The student: i. lists 1–2 basic requirements for the app, not clearly linked to Criterion A research. ii. presents one design idea (rough sketch/wireframe), no annotation. iii. creates a simple, incomplete sketch of the final screen layout.
3 - 4	The student: i. Constructs a list of success criteria for the app (simple ACCESS FM headings). ii. Presents 2–3 design ideas (sketches/wireframes) using an appropriate medium(hand drawing / digital wireframe), OR explains key features(overall layout of page/screen, flow of platform) so they can be understood by someone else iii. outlines the main reasons (2-3) for choosing the design, with reference to the specification. iv. creates planning drawings/diagrams for the main screens, OR lists what will be involved in layout / pages to build the chosen solution.
5 - 6	The student: i. develops design specifications that identify success criteria for the digital platform, linked to Criterion A research. ii. presents a range of design ideas (3–4), using sketches/wireframes, and explains key features so they can be understood by someone else. iii. presents the chosen design and outlines the main reasons for its selection, with reference to the specification with reference to the success criteria. iv. develops planning diagrams/wireframes for the main screens and outlines what's needed to build the prototype (tools, screens, features)
7 - 8	The student: i. develops a design specification that outlines success criteria for the app, based on the data collected in Criterion A (CFPC, ACCESS FM as appropriate) ii. presents a range of feasible design ideas, using an appropriate medium(Sketch or Digital Wireframe) and annotation, so they can be correctly interpreted without explanation.

Achievement Level	Descriptor
	iii. presents the chosen design and outlines the reasons for its selection with reference to the design specification and success criteria iv. develops accurate planning drawings/diagrams (wireframes/screen-flow diagrams) and outlines requirements for building the prototype (tools, screens, features, content).
