Criterion C: Creating the Solution

Criterion C is evidenced in 9½ to 10 pages across four strands. Replace each guidance paragraph and placeholder with your own work, and keep the headings.

Strand	What you show	Pages
i — Logical plan	A week-by-week plan of tasks, resources and durations that a peer could follow	1
ii — Technical skills	Each skill learnt, why it matters, and an annotated screenshot that proves it	2
iii — Follow the plan	A dated process log of intended against actual work, ending with the final product	5½
iv — Justify changes	The reason for every change to the timeline, the resources and the process	1

Strand i — Construct a logical plan that a peer could follow to create the solution

State the start date and the end date of making, and count the number of weeks between them. Give each week its own column and write its dates under the phase; add or remove columns to match your count. List every task in the order it will be done, with the resources it needs and how long it will take, then mark the week in which it happens. Write in enough detail for another person to follow the steps and create the solution without asking you anything. Keep this strand to one page.

Start date	End date	Number of weeks

Task description	Resources	Duration	Phase 1 — Week 1 (date – date)	Phase 2 — Week 2 (date – date)	Phase 3 — Week 3 (date – date)

Strand ii — Demonstrate technical skills when making the solution

Name each technical skill you learnt in order to make this solution, and state where in the solution you intend to use it. Justify why the skill is important to the quality of the solution. Beside each skill, place a screenshot of you applying it, annotated to demonstrate what you learnt. A screenshot without annotation is not evidence. Use two pages.

Skill learnt	Intended Usage	Evidence — annotated screenshot that demonstrates the learning

Skill learnt	Intended Usage	Evidence — annotated screenshot that demonstrates the learning

Strand iii — Follow the plan to create the solution, which functions as intended

Keep a process log with one entry for every making session, each with its date. Copy the task and the resources you intended from Strand i, then state what you actually completed and what you actually used. Add evidence of the task and annotate it so that it shows your effort. The log may be a table, a graphic organiser or dated paragraphs; the table below is one way to set it out. End the strand with a screenshot of the final product. Use about five and a half pages.

Process log

Date and Time	Task intended (Strand i)	Task completed	Resources intended (Strand i)	Resources used	Evidence of the task — annotated to show effort
Time intended: Time Used : Date Planned : Actual Date:					

Date and Time	Task intended (Strand i)	Task completed	Resources intended (Strand i)	Resources used	Evidence of the task — annotated to show effort

Date and Time	Task intended (Strand i)	Task completed	Resources intended (Strand i)	Resources used	Evidence of the task — annotated to show effort

Final product

Screenshot of the final product — label it Source C(iii)

Strand iv — Justify the changes made to the original plan

Justify every change you made to the original plan while making the solution. Cover three kinds of change: to the timeline, to the resources and to the process. For each one, state what Strand i planned, what you did instead and why the change was necessary. Show the original beside the final version so the change can be seen. Keep this strand to one page.

Change	Original plan (Strand i)	What changed	Justification
Timeline			
Resources			
Process			

Original plan beside the final version, with the changes marked — label it Source C(iv)
