IB MYP IB MYP Design - Ms Ishitha (MYP4)

Task Details

In this task, you'll read the *SideKick* design brief below and **develop a design specification** for it which is a list of testable success criteria the finished product would need to meet. Aim for 6–10 specification statements. The command term is **develop**, not list or describe.

This links to Criterion B strand i: "*develop a design specification which outlines the success criteria for the design of a solution, based on the data collected.*" Everything else in this design cycle checks itself against your specification — your design ideas (B.ii), your justification of the chosen design (B.iii), and your testing plan (D.i) all get measured against what you write here.

ATL focus: Thinking Skills → Critical-thinking: "*Draw reasonable conclusions and generalizations.*" Communication Skills → "*Use appropriate forms of writing for different purposes.*"

Task sheet is attached here.Design_Specification_Tasksheet.html20.02 KB

Achievement Level	Criterion B strand i descriptor	Task-specific clarification
0	Does not reach a standard described by the descriptors below.	No specification is submitted, or it consists of statements unrelated to the SideKick brief.
1–2	States a few basic success criteria for the solution.	2–4 vague statements ("it should be good," "it should work well") that could apply to almost any product. No clear link to anything in the SideKick brief, no verification method given, must/should not distinguished.
3–4	Outlines a design specification which states some success criteria for the design of a solution, with limited reference to the data collected.	4–6 statements present. Some gesture toward the brief's evidence (e.g. mentions weight or leaking) but the link is loose or assumed rather than specific, and testability is inconsistent — a mix of checkable and vague statements.
5–6	Develops a design specification which outlines appropriate success criteria for the design of a solution, based on the data collected.	6–10 statements, each following the must/should + verified-by + because structure. Most are clearly testable and traceable to a specific piece of SideKick evidence (the survey stat, the student interviews, the three-bottle comparison, the key features list).

Achievement Level	Criterion B strand i descriptor	Task-specific clarification
7–8	Develops a detailed design specification which clearly and precisely outlines the success criteria for the design of a solution, based on a thorough analysis of the data collected.	6–10 statements, every statement is precise, individually testable, and explicitly tied to named evidence from the brief. Must/should is used to show genuine judgement about priority (e.g. correctly identifying the leak-proof seal as a **must**, and something like bottle colour as, at most, a **should**). Criteria collectively cover the brief with no major gap, leak resistance, size/portability, cooling performance, ease of use, cost.

Assessment Criteria

B: Developing ideas

Achievement Level	Descriptor
0	No specification is submitted, or it consists of statements unrelated to the SideKick brief.
1 - 2	2–4 vague statements ("it should be good," "it should work well") that could apply to almost any product. No clear link to anything in the SideKick brief, no verification method given, must/should not distinguished.
3 - 4	4–6 statements present. Some gesture toward the brief's evidence (e.g. mentions weight or leaking) but the link is loose or assumed rather than specific, and testability is inconsistent — a mix of checkable and vague statements.
5 - 6	6–10 statements, each following the must/should + verified-by + because structure. Most are clearly testable and traceable to a specific piece of SideKick evidence (the survey stat, the student interviews, the three-bottle comparison, the key features list).
7 - 8	Every statement is precise, individually testable, and explicitly tied to named evidence from the brief. Must/should is used to show genuine judgement about priority (e.g. correctly identifying the leak-proof seal as a must, and something like bottle colour as, at most, a should). Criteria collectively cover the brief with no major gap — leak resistance, size/portability, cooling performance, ease of use, cost.
